Kiryana Playwright QA Coverage Report

Application: https://kiryana-pos-crk.pages.dev
Date: 28 October 2026
Browsers: Chromium, Firefox, WebKit

Final stable matrix: 71 passed, 0 failed, 0 skipped.
Chromium and Firefox used one-time authenticated storage state. Credentials were runtime-only.

Covered before today

- Public landing, routing, HTTP 200, login and registration reachability
- English/Urdu public language switching and mobile pages
- Login required fields, invalid credentials, invalid mobile/PIN, protected submit
- Authenticated dashboard, stock, sale, draft bill, controlled cash sale
- Logout, refresh persistence, protected-route redirect
- Authenticated language and dashboard mobile checks

Covered during this work

- Boundary validation and invalid registration confirmation
- Authenticated Urdu/English checks on dashboard, stock, and sale
- Additional authenticated mobile checks
- Product create, edit, and delete with cleanup
- Customer and supplier required-name validation
- Empty customer/supplier ledger creation actions
- Session clearing redirect and storage-state authentication setup
- Profit seven-day summary and daily entries
- CI workflow with runtime secrets, stable browser job, WebKit investigation job, and artifacts

WebKit investigation

31/34 passed. The isolated PIN-format and mobile-login cases passed. The profit-page case reproduced a WebKit out-of-memory crash; two other full-run page/context crashes were observed. WebKit is non-blocking in CI while investigation continues.

Still outstanding

- True server-side session expiry requires backend token-expiry or fixture control
- Successful shop registration and duplicate web-address handling require resettable test accounts
- Customer/supplier credit creation and settlement require resettable records
- The current profit/dashboard UI exposes no date-filter control
- Full authenticated Urdu content assertions across every screen
- Further WebKit root-cause investigation

Detailed case IDs and execution history are in TEST-REPORT.md. No credentials are included.
